We created a collection of courses. These courses have attributes such as course number, course name and professor. We have a starter dataset in 'model/model.js' to display these. On visiting our page without a specified path, you will be brought to the main page which has full CRUD functionality for the courses. You are able to search by course number and bring up its attributes as well as edit and delete the course. Note that both edit and delete will return true or false, depending on whether the action was successful. Additionally, you can create new courses and list all of the existing courses (optional in the assignment). The main page requests JSON objects, as can be seen in app.js.
